

STOP A LEAK

If you've done your Green Audit, you've probably already detected the leaks in your home – leaky water in faucets and toilets, the leaky air around windows and doors – but finding the leaks is only half the battle. Organize a Stop-the-Leak Day on which everyone in your family tightens, insulates, replaces, caulks, and does whatever else is necessary to make your home as “tight” as possible. Your local water, gas, or electric utility company may be able to provide help, or even instructions and supplies.
