The following definitions are provided to help you better understand the historic preservation component of the Program.

“Historic Preservation” means the performance of any work relating to the stabilization, repair, rehabilitation, renovation, restoration, improvement, protection or preservation of a structure, facility, site, area, or object that has been approved for inclusion, or otherwise meets the criteria for inclusion in the New Jersey Register of Historic Places pursuant to P.L. 1970, c.268 (C13: 1B – 15.128 et seq.)

“Preservation” means the act or process of applying measures necessary to sustain the existing form, integrity and materials of a historic property. Work, including preliminary measures to protect and stabilize the property, generally focuses upon the ongoing maintenance and repair of historic materials and features rather than extensive replacement and new construction. New exterior additions are not within the scope of this treatment; however, the limited and sensitive upgrading of mechanical, electrical, and plumbing systems and other code-related work to make properties functional is appropriate within a preservation project.

“Rehabilitation” means the act or process of making possible a compatible use for a property through repair, alterations and additions, while preserving those features which convey its historical, cultural or architectural values.

“Restoration” means defined as the art or process of accurately depicting the form, features, and character of a property as it appeared at a particular period of time by means of the removal of features from other periods in its history and reconstruction of missing features from the restoration period. The limited and sensitive upgrading of mechanical, electrical, and plumbing systems and other code-related work to make the properties functional is appropriate within a restoration project.
